

# HTB

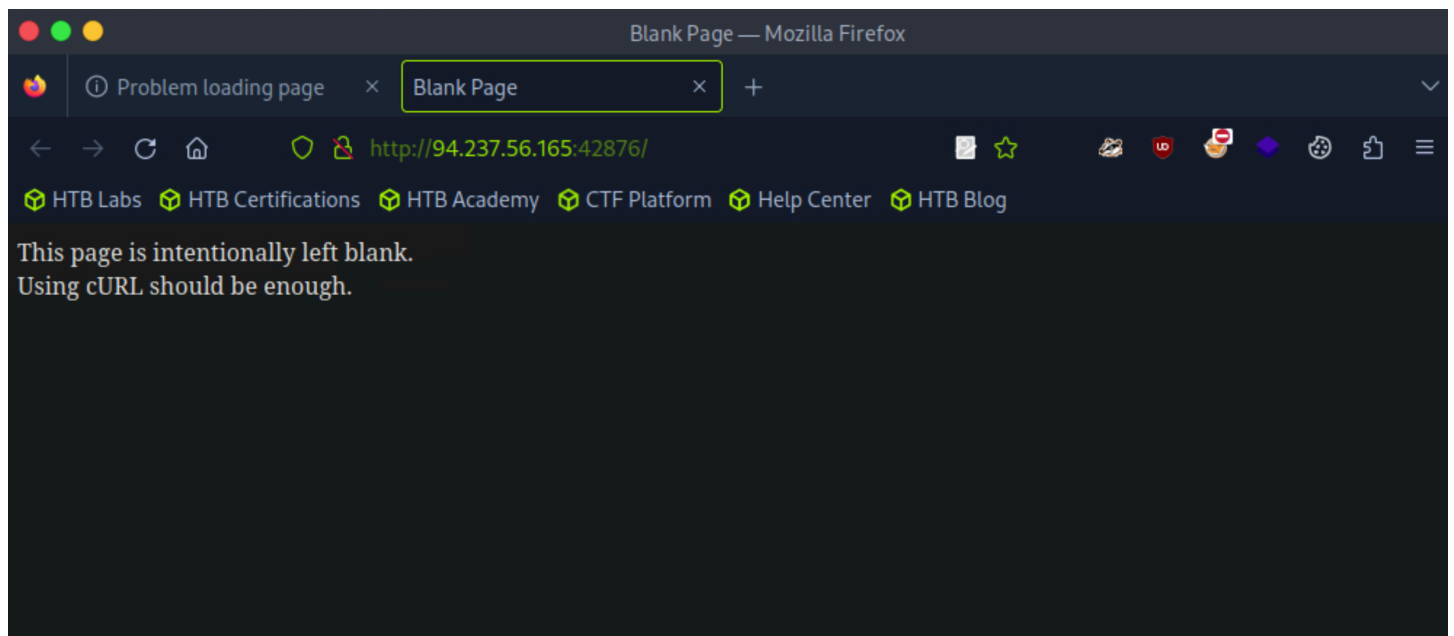

before any thing i try to get into the challenge

and do what the challenge says :

after we step into the server we will notse that there is an ip for a website or the target >>

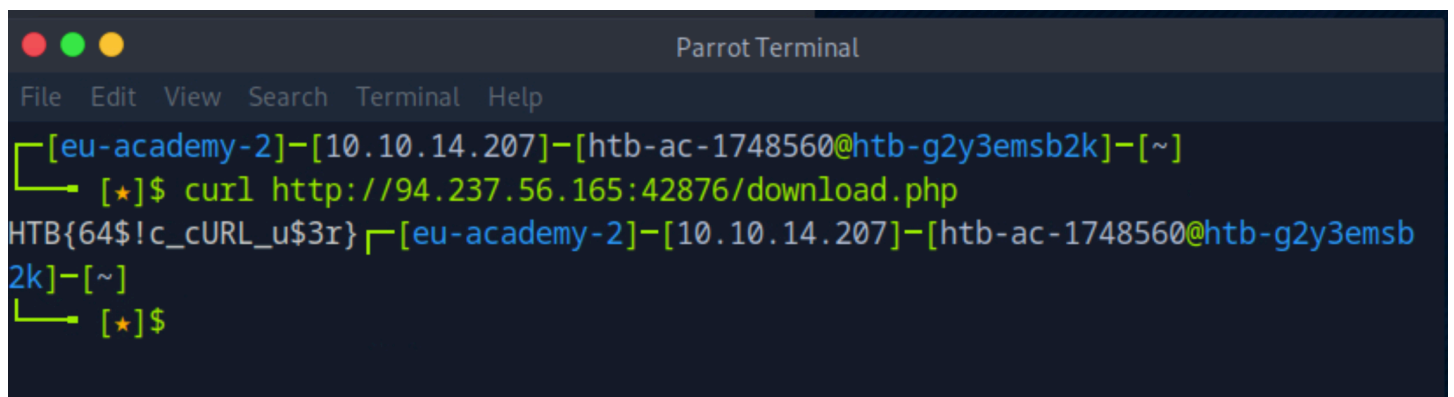

Target(s): 94.237.56.165:42876

as we can see above, after trying to search it this pop up >>

so i tried to **cURL** it but wait there is something else, there is a line told us to ( To get the flag, start the above exercise, then use cURL to download the file returned by '/download.php' in the server shown above.) so there is a FLAG and we should find it.

i **curled** the url and withe this path '/download.php' >>

and as we can see here is the flag shown up ( HTB{64\$!c\_cURL\_u\$3r} )

## Questions

[Cheat Sheet](#)

Answer the question(s) below to complete this Section and earn cubes!

Target(s): 94.237.56.165:42876 🚩

Life Left: 74 minute(s)

+ 1 📦

To get the flag, start the above exercise, then use cURL to download the file returned by '/download.php' in the server shown above.

HTB{64\$!c\_cURL\_u\$3r}
